

Future Light Design

We are a dedicated team of lighting designers and Lutron engineers, who specialise in the design and implementation of innovative and high end lighting projects; for both new and existing properties.

As a highly experienced team, our focus is to provide our clients with carefully considered lighting design, Lutron lighting control and responsive electronic window treatments.

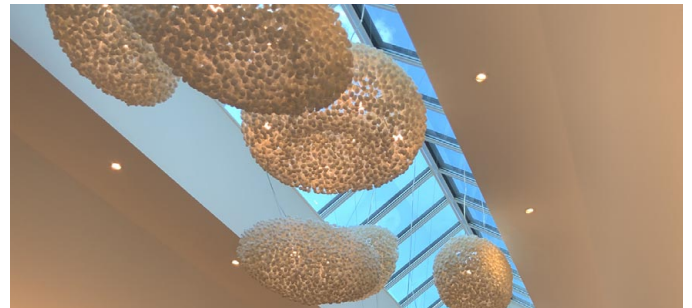

With an award winning lifestyle showroom in the beautiful village of East Horsley and a luxury showroom in Central London, we have the perfect environment to demonstrate how powerful a creative lighting and Lutron scheme can be.

Upgrading your existing lighting scheme can be a simple and effective way of enhancing the look, feel and efficiency of your home without any major upheaval. Using a combination of architectural and decorative light fittings, we can create the perfect balance of warmth, functionality and design.

Our in-house design team can create stunning bespoke decorative solutions for areas where installing existing light fittings may not be possible.

Each approach is tailored to complement the individual space, interior and design of your home whilst working closely with your specific requirements.

A Lutron control system will allow you to transform the space with a simple press of a button, creating scenes and the perfect atmosphere for any occasion.

Whether you are considering installing smart home Lutron lighting controls, optimising an existing Lutron system or having a full overhaul of your current system with the newest LED technology, our engineers are on hand to provide the very best advice and service.

Lutron electronic window treatments provide effortless control of daylight and privacy .

The range of beautiful automated rollers, romans and curtains can efficiently help to reduce solar glare and heat build up whilst protecting your furniture and home.
